

# Creating *an Impact Now*

***Plastrans expands its cooperation with BioLogiQ and continues to focus on quality & sustainability - Creating an Impact NOW!***

Plastrans Technologies GmbH, the internationally active trading company of Ghazan Global headquartered in Linz and a family office specialising in sustainable investments among other things, set the course for a successful future this year.

Alongside fulfilling regulatory requirements and customer satisfaction according to the ISO 9001 standard, Plastrans actively invests in Know How and market development for bio-based plastics. The reliable and professional partner of well-known manufacturers of conventional plastics for demanding applications has now significantly expanded the bioplastics portfolio. In addition to TPS and PLA, the range also includes bio-based PE, PP, and PS types that are ISCC Plus certified with further steps to be followed. Small steps every day!

*The bioplastics team established in the company advises customers on all processing technologies and applications and offers individually tailor-made solutions for their needs.*

The bolstered collaboration with a global company BioLogiQ Inc. and promising investments substantially complement the range of TPS grades and compounds at Plastrans. This transatlantic cooperation sealed in 2022 has a great deal of potential for the future by setting new standards for sustainable solutions that both correspond to the Zeitgeist and take into account the latest findings. Both companies share a unified vision of using bio-based and biodegradable plastics to help solve the ubiquitous waste problem caused by plastic waste for future generations in a sustainable manner.
